NEW JERSEY EARLY INTERVENTION SYSTEM NJ Department of Health and Senior Services

TOPIC Early Intervention Referral Referral The mission of the New Jersey Early Intervention System (NJEIS) is to provide quality early support and services to enhance the capacity of families to meet the developmental and health-related needs of children, birth to age three, who have delays or disabilities. There is a single point of entry for early intervention in each NJ county. Primary referral sources are required to refer a child to Early Intervention within 2 days of identification. Those sources include hospitals, physicians, parents, child care programs, local educational agencies, public health facilities, other social service agencies, and health care providers. Service Coordination Service and assists and enables eligible children and families to receive the rights, procedural safeguards, and services within NJEIS. Service coordinators are also a single point of contact in helping families to obtain community services and assistance that they might need for themselves and their child. Evaluation & An early intervention evaluation will gather information about the child to see how he or she is developing. It is used to determine eligibility for early intervention services. Assessment helps to define the types and levels of services needed by the child and family. Eligibility A child between birth and 3 years of age is eligible with at least a 33% delay in one and/or a 25% delay in two or more developmental areas. Those areas include physical, cognitive, communicative, social/emotional, and adaptive. Following the evaluation and assessment, an Individualized Family Service Plan (IFSP) is developed to describe the services that are needed by the child and family and how they will be implemented. The IFSP is both a plan and a process. The plan is a written document and the process is an ongoing sharing of information between the family and early intervention to meet the developmental needs of the child and the resource needs of the family.

member of the evaluation team. It is based on information collected from the family and the evaluation/assessment. The meeting is held at a time and location convenient to the family
and in the language or method of communication that is used at home.
Early Early Intervention services are designed to address a problem or delay in development as
in which children without special needs ordinarily participate and that are most comfortable
(EI) Services and convenient for the family.
IFSP Reviews The IFSP is reviewed every 6 months, or more frequently as appropriate, to ensure the plan
continues to meet the needs of the child and family. At IFSP meetings, the IFSP team,
which includes family members, reviews the current outcomes and early intervention
services to update as needed. A new IFSP is written at least once per year.
Transition The goal of all transitions is to assist children and families to move from one phase to
another in the most helpful way possible. Transitions can occur at any time a child and
family are receiving early intervention services. When a child is 2 years old, a transition
information meeting will be held with the parents, service coordinator, and others who have
worked with the child to begin planning services and support that might be needed when the
child turns three and leaves early intervention. This process contains several steps to
transition from early intervention to other early childhood settings and support services that the child and family may need at age three.
Cost of Service Federal law requires that specific services be provided to eligible children and families at public expense. These services include Child Find and Referral; Evaluation and
paone expense. These services include Ciliu Filia and Releitar Evaluation and I
